- (a) As reported effective tax rate is calculated as: "As reported income tax benefit" divided by "As reported loss before income taxes."
- (b) Represents the tax effect of impairments and other charges recorded during the three months ended June 30, 2020.
- (c) Management believes that the effective tax rate adjusted for impairments and other charges, and its related tax benefit, for the three months ended June 30, 2020 is useful to investors, especially when comparing this rate with previous and subsequent periods, primarily because management views the excluded items to be outside of the company's normal operating results. Management analyzes effective tax rate without the impact of these items as an indicator of normal tax results. Adjusted effective tax rate is calculated as: "Adjusted income tax provision" divided by "Adjusted income before income taxes."
